

Clover as Living Cover in Walkways and Sideslopes of Double-Dug Beds

Objectives: 1. Determine if clover as a living cover has an effect on yield of cash crops in double-dug beds. 2. Evaluate effectiveness of clover as ground cover and weed control.

Farmer-cooperator will:

- **Take photos** throughout the project.
- Keep in contact with PFI with updates and questions
- **Spring 2016**, establish 4 replications of treatment and control plots in a randomized design (as shown in Elevation and Plan views below).
- Treatment plots will have clover established on walkways and sideslopes of the bed; walkways and sideslopes on control plots remain bare.
- **Summer 2016**, for each cash crop, measure and record yield as described in the Excel workbook.
- **Summer 2016**, use a quadrat to evaluate clover effectiveness as ground cover and weed control.
- Turn in all data to PFI by October 2016

Practical Farmers of Iowa will:

- *Help set up protocol including Excel workbook for data entry, provide support as needed.*
- *Analyze data and publish results in a PFI research report, on PFI website, and potentially other outlets.*
- *Provide \$550 cooperator payment at conclusion of project year.*

Elevation View of one rep

Plan View

grayed out area is between-plot buffer;
one ft on the end of each plot not recorded with plot data. This is optional.
