

Rye Silage

May 23, 2015

My experience with making ryelage and would I do it again.

Having a beef cattle operation and a silage bunker, I decided to take of the winter rye cover crop and the silage bunker we have.

I checked into winter rye yields and feed analysis, what might I have to gain?.

Tonnage you can get, about 6 ton

Protein, can run from next to nothing to a high of 22%, which would really be great

My yield about 6 ton per acre, we put up 108 ton in about 3 hours roughly.

Protein wise, about 11%, not the 20-22% I was hoping for.

Any questions?
